 - 4.1 Regarding claim 11, and similarly claims 20 and 21, Applicant argument on page 13 is persuasive. Specifically, while Ramamurthy discloses uniform quantization for all coefficients (of a macroblock) the results of which can be represented by the same number of bits (e.g., using an 8 X 8 array of bytes to store the truncated coefficients of an 8 X 8 macroblock and in this case the DC coefficient will uses 8 bits and the m and n numbers of low- and high-frequency AC coefficients in aggregate will use $8m$ and $8n$ bits, respectively), this is not necessarily (Fig. 6 of the application presents an

alternative) so and in any event Ramamurthy has neither disclosed nor suggested an *express step* of assigning bits to the quantized coefficients.
